Technical Support and Sales:

[John.Novak@asm-catalysts.com](mailto:John.Novak@asm-catalysts.com)

**Who is ASM Catalysts:** ASM Catalysts is active in the field of catalyst and adsorbent marketing and toll manufacturing, and we offer:

1. Claus sulfur recovery catalysts and activated alumina adsorbents, particularly alumina Catalyst Support Spheres.
2. Toll catalyst manufacturing and custom made catalysts for the refining and petrochemical industries.
3. Specialty titania and zirconia powders and formed products from these powders as catalyst substrates.

In cooperation with Euro Support B.V., Eurosupport Manufacturing Czechia, s.r.o. and Riverland Industries, Inc., our new company sells adsorbents, catalyst products, and toll processing services. ASMC operates from Baton Rouge, LA, USA as the sales and technical support organization for products produced by a manufacturing alliance between Eurosupport Manufacturing (ESM) at their Litvinov, Czech Republic facilities, and at the Baton Rouge facilities of Riverland Industries. This manufacturing alliance brings ASMC a diverse variety of adsorbent and catalyst products for uses as catalyst supports, guards and traps in refinery applications, as well as the traditional products for Claus catalysis and the advanced materials used in high efficiency sulfur reduction processes. In addition, the two facilities offer a wide selection of custom manufacturing services for catalyst production, such as extrusion and other forming processes, e.g., tableting/pelletizing; size adjustment such as milling and coarse classification; heat treatments (up to 1300°C), impregnations via incipient wetness, vacuum drying, and precipitation; and hydrothermal treatments of oxide materials.

Eurosupport Manufacturing Czechia is an innovative, primary manufacturer of specialty titania and zirconia powders. For over a decade ESM has focused on material innovations for Claus catalysts, and their R&D staff has developed and shown that their mixed oxide combinations offer considerable advances over traditional materials.

Riverland Industries adds a large pool of manufacturing resources and logistical support for supplying customers in the Americas. By combining a high level of technical support with superior products, ASMC will deliver a competitive edge to their customers.

ASM Catalysts has inventories of our active alumina products for distribution throughout the Americas. Our website provides details of the products and services: [www.ASM-Catalysts.com](http://www.ASM-Catalysts.com)
